Program Objective

About CCC

Consultants Consortium of Chennai (CCC) is an Association of Management Systems Consultants, registered under the Tamil nadu Societies Registration Act, 1975.

The Key Objective of CCC is to work in alignment with the National Quality Mission launched by the Government of India by educating the industry about the role and importance of Standards, Certifications and Regulations in the country as well as in the global markets.

CCC strives to encourage Responsible Consulting through Members of its Association and focus is to Standardize Consulting Practices in alignment with changing market and industry needs in a dynamic manner.

The focus is also to identify areas and industries in which the consultants in the profession of Management Systems Consulting can contribute to the betterment of the society and the country and to promote Management Systems Consulting in such areas or industries.

One of the core objectives is to collaborate with various Industry platforms, Trade Associations, Chambers of Commerce, Management Associations, Apex Bodies of Government or Quasi Government Organization to contribute to the betterment of the industry initiatives, which will in turn contribute to the betterment of the society.

Program Outline

About the Standard

This Standard “GO 2 FOOD SAVING”, hereinafter GO2FS, in line with the objectives of the 2030 Agenda and the principles contained in Farm to Fork, is applicable to all public or private organizations in the agri-food supply chain that can have an impact on the reduction of food waste.

Furthermore, it can be used in Public Administration services both in the case of external assignment of collective catering services and in the case of direct management of the service, becoming a criterion in the evaluation of the catering service provider. It also aims to be a useful tool for food distribution chains to enhance their initiatives for the reduction of food waste.

The standard allows organizations to respond, implement and monitor the adoption of the Waste Management Hierarchy, which gives priority to waste prevention, followed by reuse, recycling, other forms of recovery and finally disposal in landfill. The objective is to minimize the negative impacts of waste production and management and improve resource efficiency. This Standard is intended as a management system for the reduction of food waste, inspired by the ISO High Level Structure (HLS) common to all management systems.
